# I'm exploring AWS Databases!

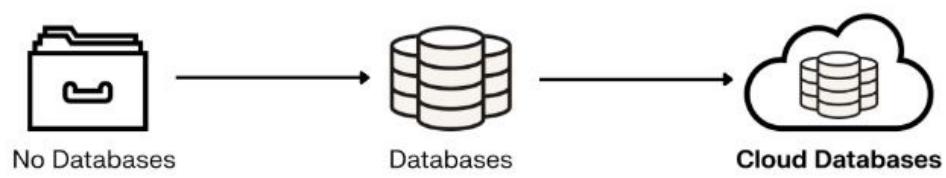

M

Mohammed Dawoud Mota

# I'm building database solutions on AWS

In this AWS Databases series, I am learning to build and manage databases on AWS. By the end, I will have created five hands-on projects that show my ability to store, query, and visualize data using cloud database services.

## Excited to share my progress - explore AWS databases with me!

I will set aside a few hours each week to work on these AWS database projects. I will stay accountable by tracking my progress and sharing updates. My reward for completing the series will be adding all projects to my portfolio.

### What are databases?

Databases are organized systems used to store and manage data efficiently. Cloud engineers use databases to keep information consistent, secure, and easily accessible for applications and users.

### What do database professionals do?

Database professionals set up, manage, and secure databases. They design data structures, write queries, ensure performance, and connect databases to applications to keep data accurate, accessible, and reliable.
